

# AMAN TYAGI

Full Stack Developer

## ABOUT ME

Full-Stack Developer (backend-focused) with 3+ years of experience developing scalable systems using Java, TypeScript and Node.js. Skilled in DDD-based event architectures, distributed processing, and database performance optimization. Strong foundation in system design and DSA, delivering efficient, production-grade microservices and automated workflows.

## EDUCATION

[Dr. APJ Abdul Kalam University | 2020 - 2024](#)

### Bachelor of Technology

Computer Science and Engineering (CSE): 8.9 CGPA

[Dr. APJ Abdul Kalam University | 2025 - Current](#)

### Master of Technology

Computer Science and Engineering (CSE)

## WORK EXPERIENCE

[Brain-mentors | 2023 - 2025](#)

### Full Stack Developer And Assistant Trainer

Developed end-to-end MERN stack applications, delivering secure and high-performance solutions. Designed RESTful APIs, built responsive React interfaces, managed state with Redux, and implemented JWT-based authentication.

[Stealth technocrats | 2025 - Current](#)

### Full Stack Developer

Designed and developed scalable backend systems using TypeScript, Node.js, PostgreSQL, and MongoDB for high-performance product and fintech workflows. Built event-driven pipelines with Kafka to improve data ingestion and API synchronization. Developed REST APIs, background jobs, and optimized database queries to enhance system reliability and performance. Collaborated with cross-functional teams to deliver production-ready, clean, and efficient architectures

## SKILLS

### Languages

Java

C++ / C

Python

Javascript

TypeScript

Go

### Backend Development

Spring Framework

Node.js / Bun Js

Fastify

Express.js

REST API Design

Domain-Driven Design

ORMs

Event Driven Architecture

### Frontend Development

React.js

Next.js

State Management

HTML5, CSS3

## PROJECTS

### SkillRisers – Learning Management Platform

MERN STACK - Next Js and Express Js

- Designed and built a scalable LMS backend using TypeScript, Node.js, PostgreSQL, and MongoDB, applying Domain-Driven Design (DDD) principles.
- Architected Kafka-based event workflows for course publishing, enrollments, and notifications.
- Developed secure, high-performance REST APIs, background job processors, and transactional data flows.
- Containerized services with Docker and implemented CI/CD pipelines using GitHub Actions for reliable production deployments.

### Tomatotrails – B2C marketplace

MERN STACK - Next Js and Fastify

- Designed and developed a scalable B2C booking platform enabling users to discover, book, and manage global transfers and activities.
- Built the backend using TypeScript and Node.js, modeling complex booking, pricing, and availability logic.
- Implemented Redis-based caching to optimize search, pricing queries, and session management, improving performance and response times.
- Developed high-performance REST APIs and integrated third-party services for payments and inventory management.
- Built and optimized the frontend using Next.js with server-side rendering (SSR) and caching strategies to enhance SEO and load speed.

## Databases

Hibernate  
MongoDB (NoSQL)  
PostgreSQL / SQL  
Drizzle ORM  
Redis (In memory)

## LANGUAGES

- English – Fluent
- Hindi – Fluent
