Go (Golang) & Node.js Backend Engineer | Microservices · Event-Driven Systems · Cloud-Native

PROFESSIONAL SUMMARY

Backend-focused Full-Stack Developer with **3+ years** of experience building **high-performance, production-grade microservices** in **Go (Golang)** and **Node.js/TypeScript**. Proficient in designing **event-driven architectures** with **Kafka**, implementing **RESTful & gRPC APIs**, and optimizing **PostgreSQL / MongoDB** for large-scale workloads. Experienced with **Docker**, **CI/CD pipelines**, and **Domain-Driven Design (DDD)** principles. Strong foundation in **DSA and System Design**, delivering clean, scalable, and maintainable codebases.

CORE COMPETENCIES & KEYWORDS

Go / Golang	Node.js	TypeScript	REST API Design	gRPC
Microservices	Event-Driven Architecture	Kafka	Domain-Driven Design	CQRS
PostgreSQL	MongoDB	Redis Caching	Drizzle ORM	Query Optimization
Docker	CI/CD / GitHub Actions	System Design	DSA	Background Jobs
Fastify	Express.js	Next.js	React.js	JWT / Auth
Spring Boot	Goroutines / Concurrency	Worker Pools	Channel Patterns	Bun.js

WORK EXPERIENCE

Stealth Technocrats

2025 – Present

Full Stack Developer – Go & Node.js Backend Engineer

- Designed and developed **high-performance microservices in Go (Golang)** and **Node.js/TypeScript** for fintech and product workflows, handling thousands of concurrent requests using **Goroutines, channels, and worker pools**.
- Built **Kafka-based event-driven pipelines** for real-time data ingestion, API synchronization, and async processing — reducing latency by decoupling services.
- Developed **RESTful APIs** and background job processors using **Fastify** and Go's **net/http** standard library with middleware for auth, rate limiting, and logging.
- Optimized **PostgreSQL queries** (indexes, EXPLAIN ANALYZE, connection pooling via pgxpool) and **MongoDB aggregation pipelines** for high-throughput reads/writes.
- Collaborated with cross-functional teams applying **Domain-Driven Design (DDD)** principles to deliver clean, production-ready, maintainable architectures.

Brain-Mentors

2023 – 2025

Full Stack Developer & Assistant Trainer – MERN Stack

- Built end-to-end **MERN stack applications** with **Node.js/Express.js** backends, **React.js** frontends, and **MongoDB** data stores; implemented **JWT-based authentication** and role-based access control.
- Designed **RESTful APIs** following OpenAPI specification; applied middleware patterns for error handling, request validation, and performance monitoring.
- Managed **Redux** state architecture and responsive UI components, maintaining clean separation of concerns across service layers.
- Trained 50+ students in Node.js, React, system design, and DSA — communicating complex backend concepts clearly.

KEY PROJECTS

SkillRisers – Learning Management Platform

Stack: Node.js · TypeScript · PostgreSQL · MongoDB · Kafka · Docker · GitHub Actions · DDD

- Architected a **scalable LMS backend** using **TypeScript/Node.js** with **Domain-Driven Design**; modelled bounded contexts for courses, enrollments, notifications.
- Built **Kafka-based event workflows** for course publishing and enrollment events, enabling asynchronous processing and decoupled service communication.
- Developed **transactional REST APIs**, background job processors, and database migrations; containerised services with **Docker** and automated deployments via **GitHub Actions CI/CD**.

Tomatotrails – B2C Global Booking Marketplace

Stack: Node.js · TypeScript · Fastify · Next.js (SSR) · Redis · PostgreSQL · Third-party Payment APIs

- Designed a **scalable B2C booking platform** for global transfers and activities; modelled complex **pricing, availability, and booking state-machine logic** in Node.js/TypeScript.
- Implemented **Redis caching** for search results, pricing queries, and session management — significantly reducing DB load and improving API response times.
- Built **high-performance Fastify REST APIs** and integrated third-party payment and inventory services; optimised **Next.js SSR** with caching strategies to boost SEO and load speed.

TECHNICAL SKILLS

Languages	Go (Golang), TypeScript, JavaScript, Java, Python, C/C++
Backend / Frameworks	Go net/http, Gin, Fiber · Node.js, Fastify, Express.js, Bun.js · Spring Boot
Event Streaming	Apache Kafka (producers, consumers, topics, partitions)
Databases	PostgreSQL, MongoDB, Redis · Drizzle ORM, Hibernate · Query Optimization, Indexing
DevOps / Cloud	Docker, GitHub Actions CI/CD, Linux, Git, Containerization
Architecture	Microservices, Domain-Driven Design, CQRS, Event-Driven Architecture, REST, gRPC (learning)
Frontend	React.js, Next.js (SSR/SSG), Redux, HTML5, CSS3
Other	System Design, DSA, JWT/Auth, Background Jobs, Concurrency Patterns

EDUCATION

M.Tech – Computer Science & Engineering	2025 – Present
Dr. APJ Abdul Kalam University	
B.Tech – Computer Science & Engineering (CGPA: 8.9 / 10)	2020 – 2024
Dr. APJ Abdul Kalam University
